PROJECT „THE NEUTRALIZATION OF INDUSTRIAL WASTEWATER RECOVERY FOR „GREEN” PRODUCT MANUFACTURING” CONTRACT NR. NP-2014/3

Within the Norwegian financial instrument co-financed project “The neutralization of industrial wastewater recovery for „green” product manufacturing” JSC Valmieras stikla šķiedra concluded a contract on September 30th 2014 with the public procurement winner „Umwelt-und Ingenieurtechnik GmbH Dresden” for equipment set for industrial wastewater neutralization recovery. According to the contract conditions planning is expected for the third and fourth quarter 2014.

Implementing the Norwegian financing instrument administrated project The neutralization of industrial wastewater recovery for „green” product manufacturing” JSC Valmieras stikla šķiera concluded a contract on the 6th of January 2015 with the company “SCO Centrs” for neutralization and recourse recovery station building and utilities construction.

In the first quarter of 2015 is starting the construction of the building and utilities, and also the equipment set for the industrial waste water neutralization treatment and resource designing phase.

On the 2nd quarter 2015 the equipment designing is concluded and it is begun with the equipment manufacturing. The construction of engineering communications is actively continuing, also the industrial waste water purification equipment delivery and installation has been commenced.

The building and also the engineering communications had been taken into service on the 3rd quarter of 2015. Also the producing and delivery phase of the industrial wastewater treatment equipment has been concluded. The equipment installation continues actively and also the equipment performance test has been started.

In the 4 quarter of 2015 the equipment adjustment is continued and checked in the test mode.

The fine adjustment of the equipment and its checkup in the test mode have been performed and completed in the first and second quarters of 2016. The equipment was commissioned on 27 April 2016. The equipment has been launched in the production mode, which reduces the negative environmental load of the production process and allows a repeated use of the raw material recovered from waste water.
